Project Street Address

City

Project Name

Construction Permit Number(s)

I, the undersigned California Registered Civil engineer, hereby certify that I or my authorized agent have inspected each of the stormwater Structural Best Management Practices (BMPs) required for the approval of the above referenced Project. I have found the BMPs to be installed consistent with the approved Stormwater Control Plan, and that BMPs were constructed and are now sufficiently stabilized in substantial conformance with the approved grading and/or building plans. I state that, to the best of my knowledge, the following elements have been satisfactorily installed or completed:

- Drain inlet and outlet elevations are correct.
- Specialized media (rock or soil) and devices installed correctly per design plans.
- Appropriate landscape plant species installed per design plans.
- Relevant maintenance manuals have been provided to the system owner/operator.
- Owner/operator is aware of any sub-grade features and required maintenance.
- Piping and connections on any sub-grade features are installed correctly.
- Structural BMPs are installed and functioning as designed per approved plans.

Any revisions made during construction to the originally approved plans were reviewed and approved by City staff and are indicated on As-Builts and revised Operations and Maintenance Plan.
